What word best describes a country that:

Pioneers revolutionary treatments for Covid, ALS, ADHD, autism, brain, skin, bladder and pancreatic cancer, heart attacks and strokes, blindness, nerve
damage, Alzheimer’s, bacterial infections, Parkinson’s, glaucoma and tuberculosis?

Sends medical and disaster relief teams throughout the world to friend and foe alike?

Discovers innovative ways to remove CO2 from the air, repair DNA, slash carbon emissions, kill germs, suppress hunger, kill nasal viruses, calm panic attacks?

Partners with other nations, including former adversaries, and philanthropic foundations on vaccine development, space exploration, scientific research, agriculture, greentech innovation, self-driving shuttles, and ocean wave energy production?

Saves the lives of thousands of its enemies’ children and leads the world in the donation of kidneys to strangers?

How about Amazing, Astonishing, Admirable? Miraculous? A Blessing?

Needless to say, Israel cannot be described as “perfect.” No country can. But calling out Israel for its flaws – real, exaggerated, and imagined – while ignoring every other nation’s faults, is among the world’s most obsessive compulsions. It has a one-word name: Antisemitism.

Fair-minded criticism of Israel’s shortcomings, by contrast, is entirely legitimate, so long as one applies the same standards to other nations AND one also credits its virtues and achievements. Far too few are aware of the latter, often through no fault of their own, since these are rarely featured in major media headlines.
So here are 130 headlines from 2021 you may have missed. They demonstrate that Israel is vastly more than the sum of its imperfections and conflicts. Perhaps, after perusing them and reading a few, you’ll agree that word describing Israel best is: Inspiring.
